

WHAT SITS ON THE BOX, AND WHY IT FITS ON ONE

The plant network

The workbench — one on-premise server

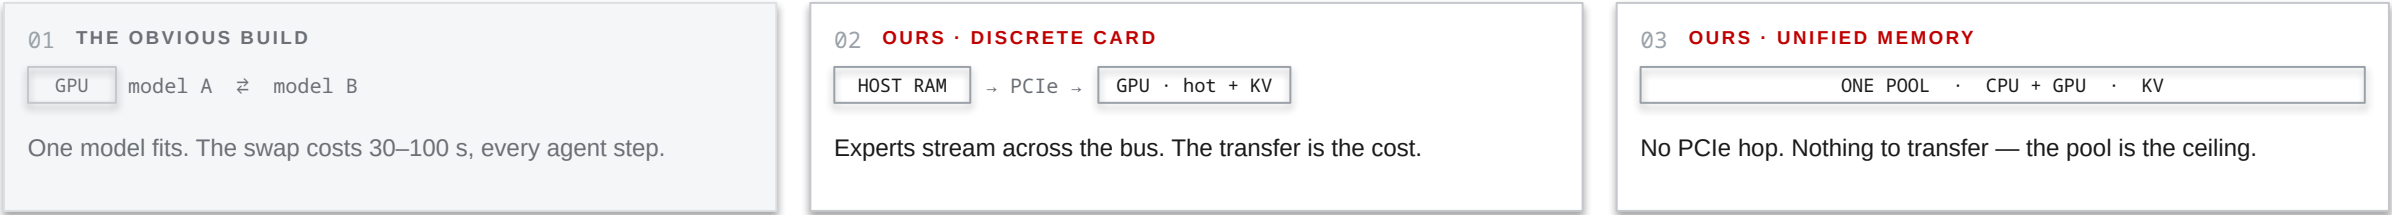

THE FENCE

default-DROP
nftables · Tetragon

Everything left of this line stays there.
Nothing dials out — the kernel refuses.

The inversion — nothing swaps, on either machine

The scarce resource stops being VRAM. It becomes memory the GPU can reach, and how fast.

First run measures which of the two this machine is.
