

STANDARD OPERATING PROCEDURE

Document No.: SOP-MECH-021

Revision: 2

Effective Date: 15 January 2026

Title: De-rating and Re-rating of Static Equipment

(SYNTHETIC DOCUMENT - created for system testing. Not a real procedure.)

1. PURPOSE

1.1 To define the engineering study required before the registered design pressure or design temperature of static equipment is altered.

2. TRIGGERS

2.1 A de-rating study shall be initiated when any of the following occur:

- (a) the computed remaining life falls below 5.0 years;
- (b) measured wall thickness falls below the minimum required thickness;
- (c) repeated non-conformances are recorded against clause 5.2 of SOP-MECH-014.

3. STUDY CONTENT

3.1 The study shall establish the revised maximum allowable working pressure using the current measured thickness, and shall be independently checked.

3.2 The revised rating shall be endorsed by the Head of Mechanical Inspection and recorded in the plant equipment register.

4. APPROVALS

4.1 No change of registered rating takes effect until the equipment register has been updated and the revised nameplate has been fitted.
